Handling Large Reports – Solution Concept

■ Short-term objective

- Support for xBRL-CSV specification
- Validation engine capable to validate large CSV files
- High performance & low resource consumption
- Additional tools necessary to implement full CSV scenario

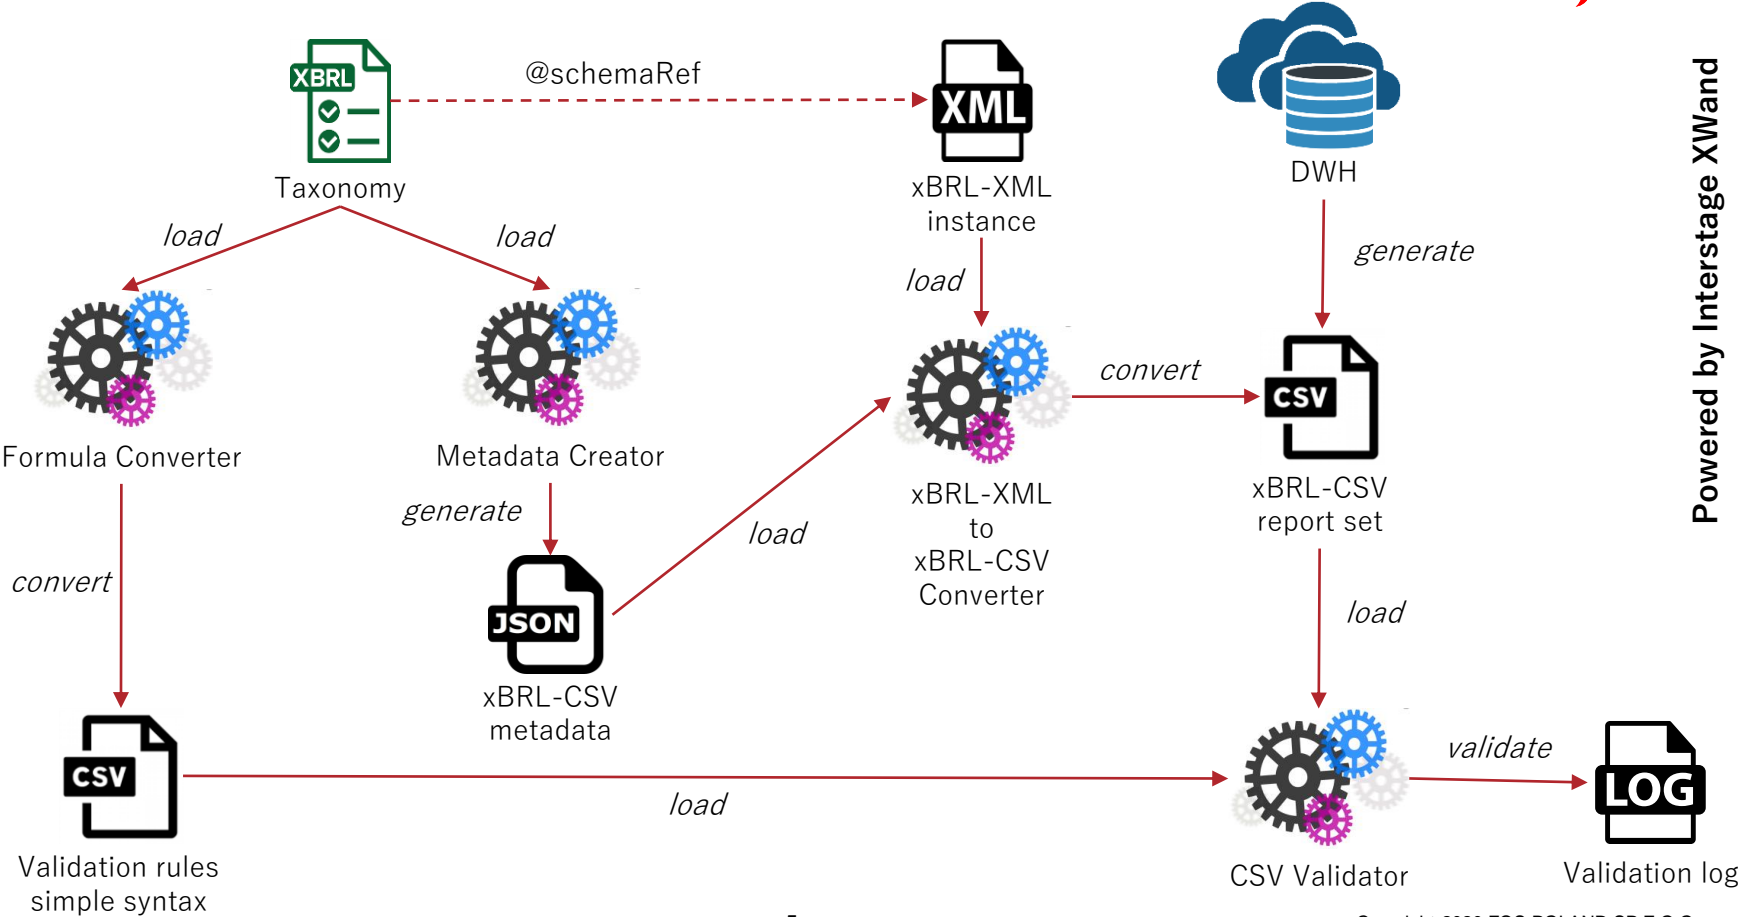

■ Final objective

- OIM as a common data model
- Mapping layer and conversion engines to handle other (non-xBRL data formats)
- High performance & low resource validation engine

xBRL-CSV Platform Concept

Powered by Interstage XWand

xBRL-CSV Platform - Concept

■ Features

- High performance evaluation of xBRL-CSV documents
- Low memory and CPU consumption
- Generic approach – taxonomy agnostic implementation
- Utilize existing Formula definition layer*

■ Architecture

- Component architecture – easy to integrate building blocks
- CLI and API interfaces

() Limitation may apply – not all rules might be finally applicable to CSV syntax*

Components

Metadata Creator

- Generate metadata JSON for xBRL-CSV reporting
-

Formula Converter

- Process Formula Linkbase to rules which can be applied to xBRL-CSV
-

xBRL-XML
to
xBRL-CSV
Converter

- Convert xBRL-XML instances to xBRL-CSV syntax
-

CSV Validator

- Validate xBRL-CSV document

Metadata Creator

- Tool for generating JSON metadata for xBRL-CSV reports
- Table definitions as defined in Table Linkbase
- Configurability
 - Closed / Open tables distribution between CSV files
- Input
 - XBRL taxonomy with Table Linkbase
- Output
 - Set of JSON files

```

Formula Converter

- Process Formula Linkbase definitions
- Convert assertions to syntax easily applicable for xBRL-CSV data
- Taxonomy-agnostic solution
- Configurability
- Input
 - XBRL taxonomy with Formula Linkbase
- Output
 - Intermediate files containing processed Formula expressions
- Current Limitations
 - XPath Expressions

```
eba_v4890_m, ${C 26.00, 010, 010} > 0  
eba_v4890_m, ${C 26.00, 010, 020} > 0  
eba_v0654_m, iaf:numeric-greater-equal-than(${C 28.00, 330}, ${C 28.00, 340})

```

Formula Converter

xBRL-XML to xBRL-CSV Converter

- Converting xBRL-XML instances to xBRL-CSV
- Integrate DPM DB (e.g. to support DPM DB ID-based rules)
- Applicability for specific usage scenarios
 - Testing xBRL-CSV workflows
 - Converting xBRL-XML instances created with established reporting processes to CSV format requested by Regulator
- Input
 - Metadata JSON for xBRL-CSV reporting
 - Input xBRL-XML instances
- Output
 - Set of CSV files

When tabular data's structure is modelled based on Table Linkbase table, then a csv file corresponds practically 1-to-1 with the table view (for open Y-axis tables)

xBRL-CSV Validator

- Dedicated validation engine for xBRL-CSV reports
- No XML data model in memory
- Capabilities
 - Rules for any kind of closed and open tables
 - Open table: rules operating per row as well as totals calculated for all rows
 - Cross-table rules
- Input
 - Validation rules definition file
 - xBRL-CSV files – reported instance
- Output
 - Validation results log

Proof of Concept

EBA 2.9.1.1

Online
Conference
15-18th June
2020

25th XBRL EUROPE DIGITAL WEEK

XBRL | EUROPE

POC Definition

■ COREP_OF_CON module (EBA 2.9.1.1)

■ Selected tables used for tests

- Open table containing large volume of granular data: C17.02
- Corresponding closed table: C17.01a

■ Validation rules

- All rules applicable for above mentioned tables

■ Goal

- Feasibility study of the full process of xBRL-CSV validation
- Detailed comparison of resource consumption between xBRL-XML/CSV validations
- Define expected conversion rates for CSV file size and validation time (& memory)

POC Steps

- **Generate sample xBRL-XML instances**
 - Random but “close to real” data
 - Few instances of different sizes (10MB, 100MB, 1GB, 2GB)
- **Trace details of xBRL-XML validation**
 - Identify top 5 rules responsible for >90% of validation time
- **Generate corresponding metadata JSON for xBRL-CSV reporting**
- **Process Formula Linkbase to expressions applicable to CSV**
- **Convert xBRL-XML test instances to xBRL-CSV format**
- **Execute and trace xBRL-CSV Validator**
- **Collect benchmark results**

xBRL-XML Formula Validation - resources

Instance size [MB]	Rows	Facts	Formula		
			Validation time [sec]	Memory consumption [GB]*	Top 5 Rule Ids
10	1000	19000	2,7	1,6	eba_v5842_h = 1.5s eba_v5838_m = 0.2s eba_v5839_m = 0.1s eba_v5017_a = 0.1s eba_v5833_s = 0.1s
102	10000	190000	14	1,7	eba_v5842_h = 11s eba_v5838_m = 0.8s eba_v5833_s = 0.4s eba_v5017_a = 0.2s eba_v4025_a = 0.1s
1000	100000	1900000	168	6,6	eba_v5842_h = 123s eba_v5838_m = 10.3s eba_v5833_s = 5.2s eba_v4861_m = 1.4s eba_v4025_a = 1.3s

eba_v5833_s	C 17.01.a	{C 17.01.a} >= 0	(0010;0020;0030;0050;0060;0110;0120;0130;0150;0160;0210;0220;0230;0250;0260;0310;0320;0330;0350;0360;0410;0420;0430;0450;0460;0510;0520;0530;0550;0560;0610;0620;0630;0650;0660;0710;0720;0730;0750;0760;0810;0820;0830;0850;0860;0910;0911;0912;0913;0914;0920;0921;0922;0923;0924;0930;0935;0936;0945;0950;0960)	(0010;0020;0030;0040;0050;0060;0070;0080)
eba_v4861_m	C 17.01.a	if ({c0010} + {c0020} + {c0030} + {c0040} + {c0050} + {c0060} + {c0070}) > 0 then {c0080} >= {c0010} + {c0020} + {c0030} + {c0040} + {c0050} + {c0060} + {c0070}	(0910;0920)	

Validation Benchmark

#	Rows	Facts	xBRL-XML			xBRL-CSV			CSV vs. XML		
			Instance size [MB]	Validate time [sec]	Memory usage [GB]*	File size [MB]	Validate time [sec]**	Memory usage [GB]	File size decrease	Validate speed increase	Memory usage decrease
1	1 000	19 000	10	2,7	1,6	0,24	0,2	0,35	42	14	5
2	10 000	190 000	102	14	1,7	2,5	0,4	0,6	41	35	3
3	100 000	1 900 000	1000	168	6,6	29	2,5	0,8	34	67	8
4	200 000	3 800 000	1980	222	13,0	39	4,2	0,8	51	53	16

Taxonomy: EBA 2.9.1.1, Module: COREP_OF_CON

CPU: Intel i7-8650U, RAM: 24GB

* Memory consumption shows overall memory needed to load and process both taxonomy and instance

** Validation time of xBRL-CSV files includes file loading time - file content is read line-by-line during validation

xBRL-CSV – Promise

- 1 File size: 40-50x smaller
- 2 Validation time: 50-60x faster
- 3 Memory consumption: constant, 2GB

xBRL-CSV – Under development

- Current development is driven by known EBAs expectations/requirements
- Final goal: Native CSV validator – not using XML data model
- Additional validation layers to be applied on xBRL-CSV files
 - XBRL, Dimensions
- Open questions
 - Formulas applicable – limitations to be defined – e.g. no Xpath Expressions
 - Metadata (JSON) file structure – single file vs file per table
 - CSV content for closed tables – e.g. transposed or not
 - CSV file structure for closed tables – single file vs file per table
 - Format of some additional properties to be provided – e.g. filing indicators
