

# Structured reporting: an early implementation study

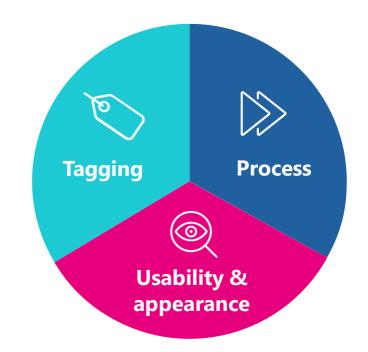

Key findings and recommendations

**Karlien Conings**Project manager
Financial Reporting Lab

**Thomas Toomse-Smith**Head of Innovation and Digital
Financial Reporting Lab

## **Key messages**

- The majority of reports across the sample fell short of the quality that is expected for companies' official filings.
- More than 70% of the files contained **tagging errors**, more than half had issues limiting their **usability** and more than 25% had **design issues**.
- Although many issues were identified during the review, almost all issues could be solved with appropriate care and attention.
- The Lab identified **practice tips** across three broad areas: **process, usability & appearance and tagging**.

## Read full report <u>here</u>

#### **Process**

- 1. Understand the requirements and get the right teams involved
- 2. Pick an approach (and service provider)
- 3. Consider whether to tag information voluntarily
- 4. Test, Test, Test
- Set up a robust governance process

Factors to consider in choosing an approach and service provider:

Timing and workflow

Bolt-on >>>> Parallel

Company involvement In-house >>>> Outsourced

Design Compliance- >>> Full design

## **Usability & appearance**

#### Attitude to the file

- Companies traditionally spend significant amounts of time, attention and resources on ensuring that communication is welldesigned and accurate.
- Companies should devote the same level of care and attention to their structured report as it becomes the official version of the annual report.

## **Formatting issues**

- Although the software available to create designed XBRL files has evolved, there are still issues caused by poor translation of design from PDF into XHTML.
- Companies should consider spending time to adapt their design upfront or building in sufficient review and remediation time.

## **Usability**

- Companies should make sure the structured report includes all the components of an annual financial report.
- It is helpful if companies put the structured report on their website, with an Inline XBRL viewer.

## **Tagging**

#### **Choosing the right tag**

- Companies should make sure the tags they use correctly reflect the accounting meaning of the reported information and reflect the judgements made in preparing the human-readable report.
- Carefully consider the tag labels and references to the related requirements in IFRS Standards.

#### **Creating extensions**

- Extensions should only be used when necessary, that is, when no suitable tag exists in the core taxonomy.
- However, companies should not try to 'shoehorn' their disclosures into core taxonomy tags to avoid extensions at all costs.

#### **Common tagging issues**

- Producing a structured report introduces a risk of new types of errors.
- Plan a review process and look out for common issues such as wrong signs (+ or -) and calculation inconsistencies.
- Warnings should be investigated but not all warnings must be resolved.

## **Next steps**

## **Supporting high-quality filings**

The Lab intends to continue supporting companies in their implementation of the requirements:

- we will work together with the FCA to monitor the quality and usability of filings during the first year of mandatory adoption;
- we may produce further guidance if necessary; and
- we are planning to host a webinar on 7 December for companies and service providers.

## **Opportunities for using the data**

We plan to do further work to better understand:

- how investors and other stakeholders are using or may use the data;
- what tools are available to analyse the data; and
- what challenges investors and other stakeholders face in using the data (for example, timeliness) and how those could be resolved.
